

A detailed black and white line drawing of three bees. One bee is in the foreground on the left, facing left. Another is in the center, facing forward. The third is on the right, facing right. They are on a rough, textured ground. A small, dark, circular object is visible in the upper right corner.

A detailed black and white illustration of a bee, likely a bumblebee, shown from a side profile. The bee is positioned on a surface covered with small, dark, irregular specks, possibly representing soil or a rough texture. The bee's body is covered in fine, radiating lines, suggesting a fuzzy or hairy texture. Its wings are spread out, and its legs are visible, with one leg raised as if it is moving or probing the surface. The head is large and rounded, with a prominent eye and a long, segmented antenna extending forward. The overall style is that of a scientific or naturalistic drawing.
